SHIVHARAKH YADAV

Full Stack Developer | React.js · Next.js · Node.js · Express · MongoDB

• Ahmedabad, India • +91 9173446846 • yadavshivharakhyadav@gmail.com • linkedin/shivharakhyadav • github/ShivharakhYadav

SUMMARY

Software Engineer with 4 years designing and shipping production SaaS platforms across React.js, Next.js, Node.js/Express, and MongoDB, with experience spanning fintech, sports, transport, and healthcare domains. Comfortable owning problems, schema design for multi-tenant data isolation, conflict-safe booking/allocation logic, caching and query optimization, and real-time systems at Socket.IO scale, with end-to-end ownership from requirement gathering to deployment. Known for taking ambiguous requirements and turning them into scalable, production-ready architecture, with direct client communication across Australia and the US, and mentoring of junior engineers along the way.

CORE ENGINEERING STRENGTHS

- **System & Data Design:** multi-tenant schema design, data isolation strategies, indexing for query performance
- **Concurrency & Reliability:** race-condition-safe allocation logic, interval-overlap conflict detection, idempotent API design
- **Performance Engineering:** Redis caching, code-splitting, lazy loading, React Query caching, load-time and latency reduction
- **Real-Time Systems:** Socket.IO channel/room architecture for live chat and events at scale
- **Security:** Auth0 (RS256/JWKS JWT validation), HMAC-signed webhook verification, role-based access control (RBAC)
- **Collaboration:** cross-functional ownership with PMs, backend engineers, and client stakeholders; mentoring junior engineers

KEY IMPACT

- Architected a multi-tenant data model (schema-per-tenant, tenant-scoped indexing) for a SaaS platform serving **944+ users across 10 organizations** with safe B2B/B2C data isolation.
- Designed interval-overlap conflict detection for a real-time booking engine, preventing double-booking under concurrent requests.
- Built a race-condition-safe seat/license allocation workflow using transactional writes to prevent duplicate claims.
- Improved application performance by **40%** via code-splitting, lazy loading, and React Query caching, verified with profiling.
- Owned full-stack delivery end-to-end on live client engagements, from requirements through architecture to deployment, across teams in Australia and the US.

TECHNICAL SKILLS

- **Language:** JavaScript, Typescript
- **Frontend:** React.js, Next.js (App Router), Redux Toolkit, Zustand, Context API, React Hook Form, Responsive web design, Component-Based Architecture, Tailwind CSS, Material UI, Antd, Fluent UI
- **Backend:** Node.js, Express.js, NestJS, RESTful API design, Socket.IO, Microservices Architecture, twillio, stripe
- **Database:** MongoDB, PostgreSQL, Redis
- **Testing & Quality:** Jest, Vitest, Playwright (E2E), React Testing Library
- **DevOps & SDLC:** Git, GitHub Actions, Docker, CI/CD pipelines, Jira, ClickUp, Agile & Scrum
- **Cloud & Deployment:** AWS, Vercel, Render
- **AI-Assisted Development:** Cursor, Claude

EXPERIENCE

ViitorCloud Technologies Pvt. Ltd. | Software Engineer *Oct 2025 – July 2026*

DMS Simulation Platform | **Tech Stack:** *Next.js, TypeScript, Node.js, Express REST API, MongoDB, Docker*

- Engaged as the sole full-stack engineer on this client project, owning requirement gathering and cross-functional communication end-to-end, coordinating with a project manager, a backend engineer, and client-side stakeholders.
- Led frontend architecture for a multi-tenant SaaS product (**944+ users, 10 organizations**), designing the tenant data-isolation approach and shared session/auth state via Context API.
- Built the simulation-delivery frontend spanning **16 interactive modules** with real-time session timers and tab-close handling, and delivered a full B2B licensing workflow (requests, approvals, seat allocation with concurrency-safe writes, audit export) validated with Jest.
- Managed CI/CD pipelines and release deployments; translated client feedback into sprint-level deliverables through daily communication.

Saluta - Health & Coaching Platform | **Tech Stack:** *Next.js, TypeScript, NestJS, PostgreSQL, TypeORM, Socket.IO, Redux Toolkit, Tailwind, Docker*

- Owned full-stack delivery of a health and coaching platform serving **329+ users including 15 coaches**, building both the frontend (admin/coach and coachee panels) and the RESTful backend API (**NestJS + PostgreSQL/TypeORM**) for the questionnaire module end-to-end.
- Designed and built the questionnaire module's REST API and **PostgreSQL schema** (template creation, assignment, and response collection endpoints), with role-based access control (RBAC) and responsive UI across 8+ core modules.
- Implemented real-time chat (Socket.IO) with channels, broadcast messaging, media sharing, and reactions, plus calendar and appointment scheduling, validated with Jest unit tests.
- Delivered habit-tracking, content/library (rich-text, search), task management, notifications, and subscription modules on the frontend, with the platform deployed on Vercel.

iFour Technolab Pvt. Ltd. | SoftwareEngineer *Aug 2022 – Oct 2025*

Moto Venice | **Tech Stack:** *Next.js, TypeScript, Node.js, MongoDB, Auth0, Mapbox, Jest, GitHub Actions*

- Built a Swagger-documented RESTful API and a production-scale Next.js storefront with TypeScript, including date-range availability filtering with interval-overlap queries and SEO-friendly slug-based routing.
- Developed a booking configurator with real-time availability calendars, live price calculation, and a distance-based delivery-fee engine using the Mapbox Directions API.
- Extended the platform with two full-stack rental modules: an hourly/daily *"shoot rental"* flow for photo/video shoots with its own pricing structure, and a motorcycle detailing service with flexible appointment scheduling.
- Built the frontend for a consignment/rental management program, letting bike owners list their motorcycles with a 50-50 revenue-split display and storage/inspection tracking, extending the platform into a two-sided marketplace.
- **Application Resiliency & Security:** integrated Auth0 authentication end-to-end (RS256/JWKS JWT validation, webhook-driven user sync, Veriff KYC via HMAC-signed webhooks), with GitHub Actions CI/CD and deployment on Render.

Bill of Materials (BOM) Workflow Management System | **Tech Stack:** *React.js, .NET, MySQL, Material UI, Redux toolkit, Zustand*

- Designed and developed an end-to-end BOM creation and approval workflow across 4 approval roles with a modular, maintainable component architecture.
- Built an Excel-like costing interface for real-time editing and calculation of component costs, totals, and margins, backed by unit tests for the core calculation logic.
- Owned end-to-end delivery, including daily client communication, requirement gathering, and sprint planning, improving BOM approval efficiency by **~30%**, with the application deployed on Vercel.

Dagger Concept - Sports Data Platform | **Tech Stack:** *React.js, Redux Toolkit, Node.js, Socket.IO, React Query, Python, PostgreSQL*

- Architected a full-stack platform from scratch (React.js, Node.js, PostgreSQL), deployed on AWS, with end-to-end ownership from database schema to deployment.
- Designed the Socket.IO channel/room architecture powering real-time chat and live events, integrated alongside a Python backend in a multi-service architecture.
- Improved application performance by **40%** through code-splitting, lazy loading, React Query caching, and profiling with React DevTools.
- Mentored junior engineers on code quality and best practices; drove daily client communication with Australia-based stakeholders, translating business requirements into sprint-level deliverables.

EDUCATION

- **M.Sc. Computer Application & Information Technology**, Gujarat University (2020–2022), GPA 3.8/5
- **B.Sc. Computer Application & Information Technology**, Gujarat University (2017–2020), GPA 3.6/5
- Higher Secondary (10th–12th), Rashtra Bharti School, Gujarat Board (2015–2017), 82%
